PROFESSIONAL EXPERIENCE

DataOps Engineer, Sigmoid 11/2024 – present | bengaluru, India

- **Built customer-support AI agents** using LangChain and LangGraph, developing custom tool integrations for handling technical and process-related queries, with **Langfuse** implemented for robust observability and tracing.
- **Orchestrated end-to-end MLOps workflows in AWS SageMaker**, including data preprocessing pipelines, model training pipelines, and automated deployments to ECS. Implemented **automated retraining** triggered by data drift and model drift using EventBridge, Lambda, and SNS email alerts.
- **Integrated MLflow** for lifecycle management of LLM and deep learning models (PyTorch, Transformers, MBART, and embedding models) within Databricks workflows, enabling experiment tracking, versioning, and serving.
- **Developed a SQL rule generator** using Azure AI Foundry's GPT-4o-mini to create context-aware validation rules based on schema metadata and profiling results, backed by **ChromaDB** as the vector store.
- **Deployed a two-tier application on AKS** using Helm charts, configured Ingress for routing, and integrated API Gateway for secure access control. Used Azure DevOps pipelines for CI/CD and ADF Dev-Prod synchronization.
- **Built AWS infrastructure and networking** using Terraform, and deployed **Apache Airflow on AKS**, including DAGs capable of processing multilingual scripts and orchestrating complex workflows.
- Designed a scalable **MLOps framework** with MLflow and Ray, enabling parallel training and 4x faster experimentation across ingestion, training, and deployment workflows.
- **Integrated Databricks Asset Bundles (DAB)** to automate model deployment pipelines, cutting deployment time by 50% across dev, staging, and production environments.
- Developed a Python-based multi-cloud billing ingestion module using **FastAPI**, PostgreSQL, and **Celery** to fetch, transform (via custom SQL), and store 10M+ monthly records from AWS, Azure, and GCP cost and usage APIs.

Associate software engineer, Test yantra 03/2023 – 02/2024 | bengaluru, india

- Built an HR management application using **Django** and **Django REST Framework**, including RESTful APIs and a student-company **matching/filtering system**.
- Implemented **JWT authentication** with **role-based permissions** for admin, company, and student users.
- Designed the complete **PostgreSQL database schema**, ensuring efficient relations and optimized queries.
- Added **Redis caching** and integrated **Celery** for background processing and scheduled tasks.
- Wrote **pytest test cases** and containerized the application by building **Docker images** for deployment.

EDUCATION

B.Tech In Computer Science & Engineering, 2022 | Rourkela, Odisha, India
Biju Patnaik University of Technology

SKILLS

Programming & Core CS — Python, JavaScript, Data Structures and Algorithms (DSA), Linux, Git

Gen AI & MLOps — Langchain, Langraph, Langfuse, Sagemaker, Ray, Mlflow, Zen ML, Databricks, vector db

Cloud & DevOps — AWS, Azure, Docker, Kubernetes, Helm, Github, Azure devops, Github action

Web Development & Databases — FastAPI, Django, Next JS, Tailwind CSS, Postgres, MongoDB

CERTIFICATES

Microsoft Certified: Azure AI Engineer Associate (AI-102)

Design and implement an Azure AI solution using Azure AI services, Azure AI Search, and Azure Open AI.

AWS Certified Machine Learning Engineer – Associate (MLA-C01)

demonstrating validated expertise in designing, building, and deploying ML solutions on AWS.
