Summary

MLOps Engineer with a strong focus on **end-to-end ML systems** – from data pipelines and distributed training to model serving, drift monitoring, and automated retraining. Currently building **production agentic AI systems** using LangChain and LangGraph, combining LLM orchestration with robust MLOps practices across AWS, Azure, and Databricks. Passionate about closing the gap between experimentation and reliable production ML.

Skills

Agentic AI & LLMs	LangChain, LangGraph, Langfuse, RAG, Prompt Engineering, ChromaDB, LLMOps, Azure AI Foundry
MLOps & Production ML	MLflow, SageMaker, Ray, ZenML, Databricks, Drift Detection
Cloud & DevOps	AWS, Azure, Docker, Kubernetes, Helm, Terraform, GitHub Actions, Azure DevOps, EventBridge, Lambda
Web & Databases	Django, FastAPI, Next.js, Tailwind CSS, PostgreSQL, MongoDB, Redis, Celery
Programming & Core CS	Python, JavaScript, SQL, DSA, Linux, Git

Work Experience

Sigmoid (Astar Data LLP)

Feb 2024 – Present

MLOps Engineer · Bengaluru, India

- Architecting and deploying **production-grade agentic AI systems** using LangChain and LangGraph with custom tool integrations; implemented Langfuse for full observability, tracing, and cost monitoring across all LLM interactions.
- Orchestrated **end-to-end MLOps workflows** on AWS SageMaker covering data preprocessing, distributed model training, and automated ECS deployments; implemented drift-triggered retraining via EventBridge, Lambda, and SNS alerting.
- Integrated **MLflow** for complete lifecycle management of LLM and deep learning models (PyTorch, Transformers, MBART, embedding models) within Databricks – experiment tracking, model versioning, and serving.
- Built a **SQL rule generator** using Azure AI Foundry's GPT-4o-mini that auto-generates context-aware data validation rules from schema metadata and profiling results, backed by ChromaDB as the vector store.
- Deployed a **two-tier application on AKS** using Helm charts with Ingress routing and API Gateway for secure access; maintained CI/CD via Azure DevOps and ADF Dev-Prod environment synchronisation.
- Provisioned **AWS infrastructure with Terraform** and deployed Apache Airflow on AKS, authoring DAGs capable of processing multilingual scripts and orchestrating complex multi-step workflows.
- Designed a **scalable MLOps framework** using MLflow and Ray enabling parallel training and 4× faster experimentation across ingestion, training, and deployment stages.
- Integrated **Databricks Asset Bundles (DAB)** to fully automate model deployment pipelines, reducing release time by 50% across dev, staging, and production environments.
- Developed a **multi-cloud billing ingestion module** using FastAPI, PostgreSQL, and Celery to fetch, transform, and store 10M+ monthly records from AWS, Azure, and GCP cost/usage APIs.

Test Yantra

Mar 2023 – Feb 2024

Associate Software Engineer · Bengaluru, India

- Built an **HR management application** using Django and Django REST Framework with RESTful APIs and a student-company matching and filtering system.
- Implemented **JWT authentication** with role-based access control for admin, company, and student personas.
- Designed the complete **PostgreSQL schema** ensuring normalised relations and query-optimised structure.
- Added **Redis caching** and Celery task queues for background processing and scheduled job execution.
- Wrote pytest test suites and **containerised the full application** with Docker for consistent deployments.

Education

Biju Patnaik University of Technology

2018 – 2022

B.Tech in Computer Science & Engineering · Rourkela, Odisha, India

Certifications

AWS Certified ML Engineer – Associate

2024

MLA-C01 · Validates expertise in designing, building, and deploying **ML solutions on AWS**.
